AI & Future

Phone ID

Introduction

A unique phone ID is generated according to the device information of the mobile phone. People can use the Phone ID to make Internet-based voice calls, video calls, and social interactions. Unlike traditional phone numbers, every Phone ID user has their own profile for socializing over the Internet.

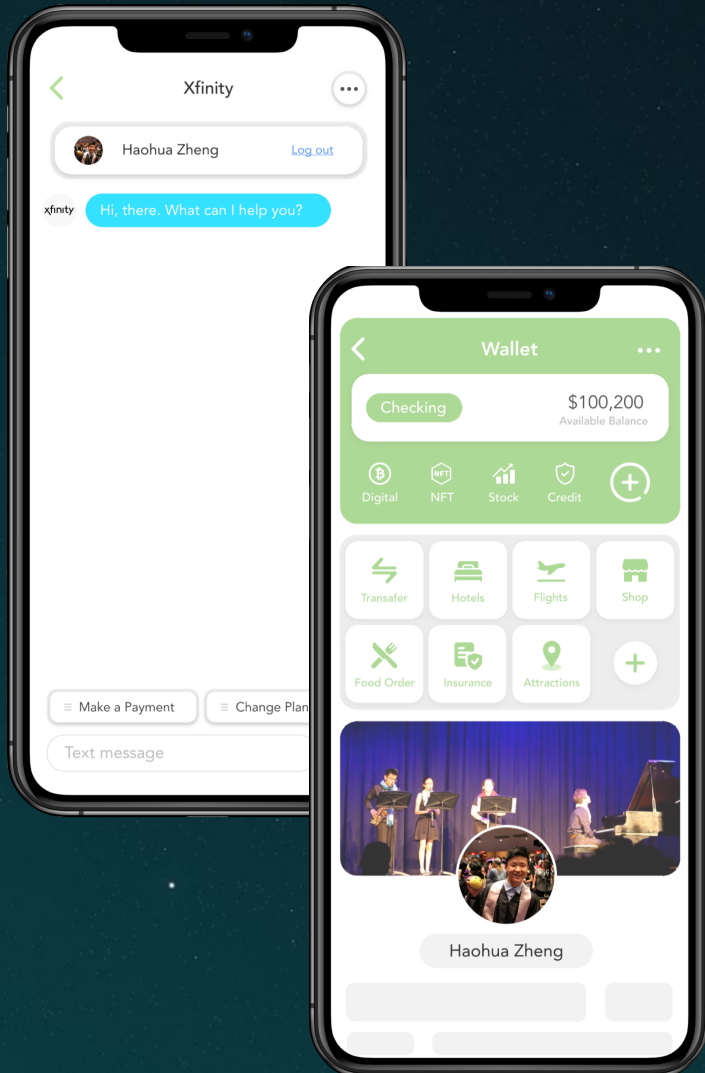

Vision: Disrupting wireless carriers

1. Replacing phone numbers as a better communication method in the future.
2. Creating a more convenient, secure, and transparent communication environment for people. For example, purifying all spam messages & calls, providing more efficient communication functions, and creating a clean and relaxed social environment.
3. Establishing global socializing by breaking down communication and cognitive barriers to allow people to understand and accept each other as a cohesive whole.
4. Providing free internet access to users in the future, gradually replacing carriers.

Services

Introduction

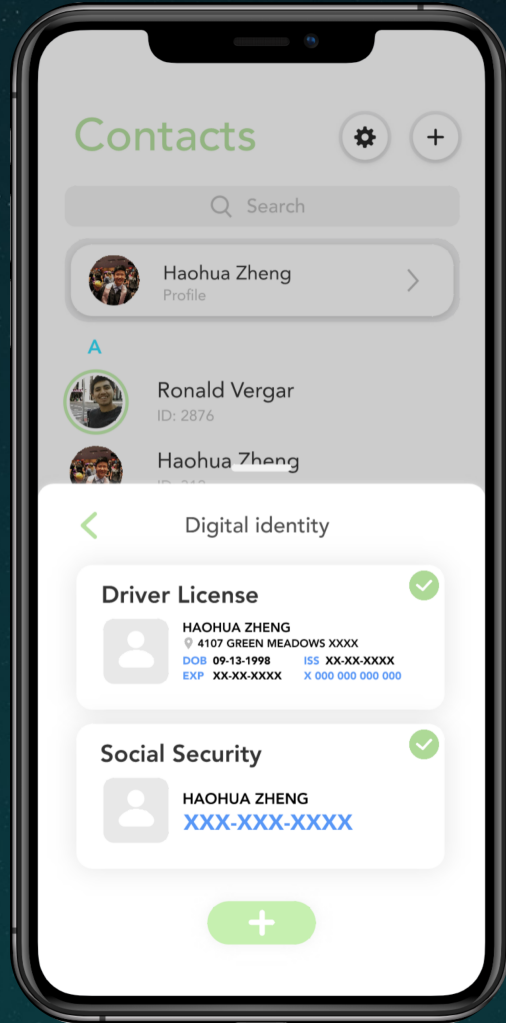

People can use the Services function to easily complete and manage all their daily tasks in one click such as paying utility bills, insurance, rent, subscriptions, and so on. In addition, people can book hotels, buy flight tickets, buy stocks, etc.

Vision: Disrupting traditional social media

1. Making people's lives more futuristic by efficiently completing complex day-to-day tasks.
2. Creating a comprehensive tool by collecting all resources and services in one.

Digitalization

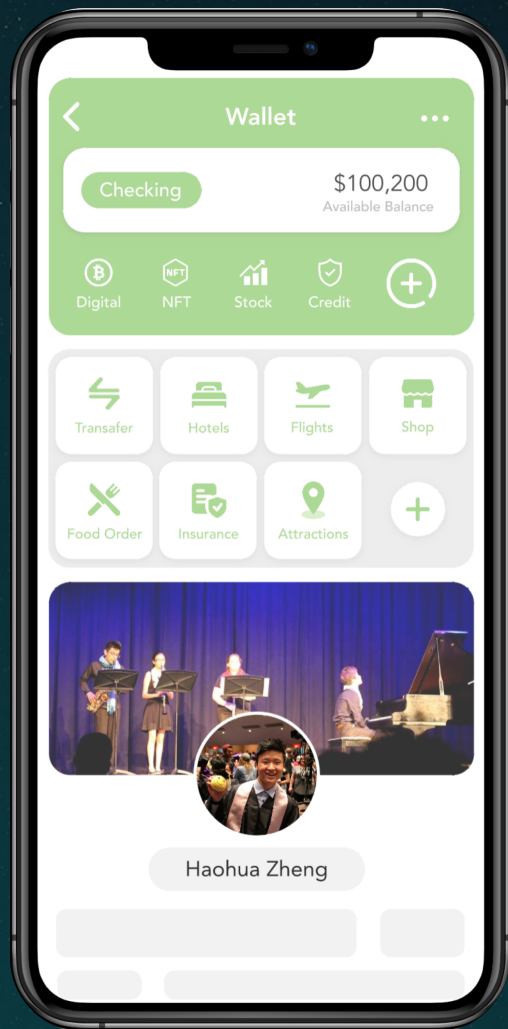

Introduction

Each user can digitize their own documents and files on Univercy such as ID cards, driver's licenses, insurance cards, and so on. Through digitalization, people won't need to carry documents at any time and worry about losing said documents.

Vision: Innovating traditional rules

1. Making people's lives more digital, all paper documents will be digitized and encrypted using blockchain technology.
2. Building a digitally-led world and making people's lives more futuristic and efficient.

Wallet

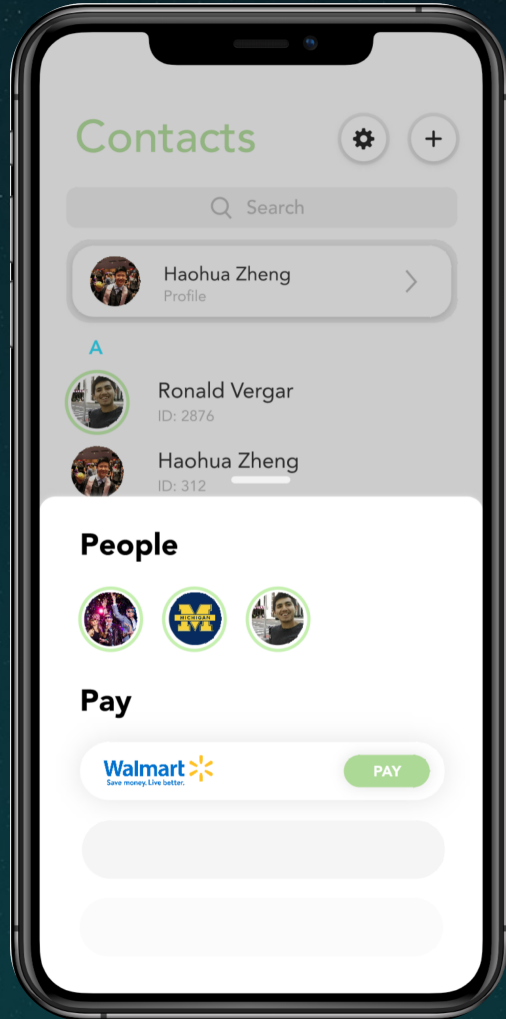

Introduction

Each user will have their own personal wallet which can be used to pay for all of their transactions such as grocery shopping, transferring money, online transactions, and so on. Unlike the transaction model of traditional banks, people don't need to worry about losing money due to their credit card information being stolen. All deductions on their Wallet must be approved by the user to ensure the management of their money.

Vision: Disrupting traditional banks

1. Establishing a safe trading environment based on a new transaction model.
2. Establishing a brand-new banking system based on the Internet. Through Wallet, people can directly access the stock market, buy digital currency, purchase NFT, and so on.

Air Connection

Introduction

Air Connection helps users connect to everything. The future must be an era of intelligence, all smart devices and furniture can be connected and controlled via Air Connection. For example, the Air Connection can be turned into an electronic key for cars and home doors. It also helps people add friends and make payments quickly.

Vision: Innovating the traditional lifestyle

1. Making people's life more convenient, all daily complex operations can be completed and unified by Univercy.
2. Univercy will produce and connect more smart items in order to help people live better. For example, smart desks, smart beds, and even smart shoes, and so on.

Vision

Thank you for reviewing my product. As you can see, nowadays mainstream social media is losing its value. As a platform that connects billions of people, its functions and responsibilities should not be limited to just helping people communicate. More importantly, social media should be integrated into people's lives to help them better manage their lives, which is the new responsibility of social media.
